CO<sub>2</sub>Management

ENERGY & BUSINESS

CO<sub>2</sub>Management is an online tool for professional CO<sub>2</sub> administration. The success of a sustainability policy is based on how the administration is set up. A team of programmers works on CO<sub>2</sub>Management to keep the tool continuously up-to-date, using the knowledge and experience of Climate Neutral Group's professionals. The tool gives you regular reports with one click of the button.

### An Efficient CO<sub>2</sub> Administration

Choosing the CO<sub>2</sub>Management tool gives you professional CO<sub>2</sub> administration, including support for implementation and use from the Climate Neutral Group. You meet the requirements for managing, monitoring and reporting on your CO<sub>2</sub> footprint and the effects of the measures you are taking to reduce it. The CO<sub>2</sub>Management tool makes setting and keeping up with your CO<sub>2</sub> administration much easier and helps you to attain more. After all, your energy should be used for realizing your sustainability ambitions, not paperwork.

### How do we work?

Effective CO<sub>2</sub> administration is set up using a structured process, as follows:

- Do an orientation scan of your organization and your sustainability policy.
- Determine which variant of the CO<sub>2</sub>Management tool fits your organization best.
- Set up a framework to logically administer your CO<sub>2</sub> emissions (flexibility is built in order to respond to any future changes within the organization).
- Implement the framework in the tool.
- If applicable to your organization, set up a management, reporting and reduction plan that meets the requirements of specific certification programmes.
- Collect data and input usage data and reduction goals.
- Instruct staff on the use of the tool.
- Provide functional support.

The process is customized for your organization and the steps taken may vary depending on factors such as your organization and its available capacity.

### What can you do with the results?

When the CO<sub>2</sub> administration has been set up, you can easily calculate your CO<sub>2</sub> emissions, monitor your reductions and adjust what you are doing at any time. You can also make reports that comply with various guidelines and you can use the results in your own yearly reporting and communication.

### Henriëtte Davelaar

Cooperation and Sustainability Manager - PGGM

*"The CO<sub>2</sub>Management tool has the advantage that you can intervene and adapt to changes throughout the year, not just after the fact. We have learned that vehicle use and the number of flights we take form a relatively large part of our CO<sub>2</sub> emissions so we are going to consider how we can reduce these. Among other things, we have started to use a shared electric car. The reports also showed us how we could lower the emissions of our lease cars."*
